

Reformulated non-stimulant medication used primarily for the treatment of ADHD (Reformulating)

ABOUT

Atomoxetine Oral Liquid is a reformulated, easy-to-dose version of the established atomoxetine capsule therapy for ADHD, designed for patients who struggle to swallow capsules. In addition, it enables precise weight-based and flexible dosing and improved palatability, addressing important compliance, acceptability and other administration challenges in pediatric patients or other patient subpopulations with issues swallowing oral solid capsules.

STAGE

Following successful completion of the U.S. clinical trial in summer 2025, the NDA was filed with the U.S. FDA in early 2026 by Hyloris' commercial partner Rosemont Pharmaceuticals. In addition, patient participation in a supporting clinical trial for Europe was completed in Q1 2026 and may support future filings in additional territories once results become available.

INDICATION

Primarily indicated for the treatment of ADHD, especially in patients who benefit from flexible dose titration and an oral liquid presentation.

BENEFIT

This taste-masked oral liquid enables precise weight-based dosing and easier titration, supporting adherence and tolerability, particularly in children and adolescents who may not reliably take capsule formulations.

IP RIGHTS / EXCLUSIVITY

Multiple patents and pending applications provide potential protection through 2044, including claims covering the oral liquid formulation.
